Generali Jeniot is at the 2020 **CES** Consumer Electronic Show in Las Vegas to present *Jeniot Home | AirSafe*, the IoT device for domestic risk protection and prevention.

Jeniot Home | AirSafe monitors air quality in homes and can alert the user in the event of potential dangers such as gas leaks or fire, by activating acoustic and visual alarms, push alerts and an innovative proactive assistance service delivered through a 24/7 operations centre. *Jeniot Home | AirSafe* is also a smart light that changes colour and gradient to increase comfort in the home.

Jeniot Home | AirSafe was developed in collaboration with **Nuvap** as part of the open innovation project on Health & Wellness issues promoted by **Cariplo Factory** with Generali.

Generali Jeniot CEO Francesco Bardelli said: “*We want to meet people’s new lifestyles and habits. Jeniot Home | AirSafe enhances our integrated new-generation offer with a smart, technological, proactive solution for constantly changing needs now that people spend 90% of their time indoors.*”

Anders Nilsson, Startup & Internationalisation Senior Advisor at Cariplo Factory, said: “*Jeniot Home | Air Safe is the outcome of an open innovation project on Health & Welfare set up by the Generali Group and Cariplo Factory. The industrial collaboration established between Nuvap and Generali Jeniot as part of the project has now led to the market launch of this new product. We are delighted with the result because it reflects our mission to encourage contamination and innovation among high-potential start-ups and large corporations.*”

Nuvap CEO Antonella Santoro said: “Nuvap is proud to have brought its competences and long-term experience in the management of indoor pollution to this project. Attention is growing to environmental quality in the places where we spend our time, to the benefit of everyone’s health and well-being.”

Generali Jeniot is the Generali Italia company set up in 2018 to develop innovative services for urban mobility, intelligent homes, health and the connected workplace, as part of the Internet of Things and Connected Insurance.
